

## COMPETENT, RELIABLE, FLEXIBLE

Our highly qualified employees develop specific solutions for your adhesive application

**Our in-house technical centre is dedicated to the spirit of research. Here we offer you testing possibilities for the most diverse range of methods, procedures and test purposes.**

At our technical centre, we simulate, test and develop innovative special solutions according to your requirement profile. In doing so, we systematically determine the appropriate solution for your individual needs in a process-oriented manner, while maintaining efficiency and precision with the highest level of performance.

### Equipment at our technical centre

- Melting equipment from our own production such as drum melters, bag melters, tankers and extruders for melting and conveying adhesives and sealants as required.
- Application systems for the application of adhesives and sealants as spray, bead, multiline or flat applications
- Measurement and analysis equipment for process monitoring and optimisation
- Coating systems and conveyor belts with integrated winding technology for the production of small batches and samples up to 600 mm application width and speeds up to 50 m/min
- 6-axis industrial robot with 60 kg payload

Whether PUR application systems, hotmelt application equipment, extruders, coating or special systems, our experts on adhesive bonding technology will be happy to advise you and test individual solutions with you in our technical centre.
